EXPERIENCE

HTEC Group

Software Engineer

Nov 2024 – Present, Full-time, Hybrid

- Develop and maintain high-throughput backend services using Java and Spring WebFlux, handling reactive, non-blocking workloads and event-driven communication via Kafka in a production environment.
- Own multiple services end-to-end – from feature planning and implementation to deployment, monitoring, and long-term support.
- Lead feature development independently across several services, coordinating with product, QA, and other engineering teams to drive delivery.
- Actively use Claude Code as a core part of the development workflow for over 6 months, integrating AI-assisted coding into day-to-day engineering tasks.
- Write unit and integration tests using JUnit and Mockito to ensure service reliability and catch regressions before deployment.

HTEC Group

GoLang Developer Intern

Sep 2024 – Oct 2024, Internship

- Developed backend services in Go within a cross-functional team encompassing backend, QA, product, and design – gaining exposure to a realistic end-to-end engineering process across the full software lifecycle.

Inovatec Systems

Full Stack Developer Intern

Jul 2024, Internship

- Participated in a team of four interns developing an Intake project planning tool using Angular, .NET, and MS SQL Server. Utilized Azure and Jira throughout the project lifecycle.

EDUCATION

University of Kragujevac, Faculty of Science and Mathematics

Bachelor's Degree in Software Engineering (Diplomirani Informatičar – Softverski Inženjer)

Sep 2021 – Apr 2026

SKILLS

Languages: Java (primary), Kotlin (familiar), Go (familiar), SQL, TypeScript

Frameworks: Spring Boot, Spring WebFlux (primary); familiar with Angular, Node.js

Testing: JUnit, Mockito, integration testing

Data & Messaging: PostgreSQL, Elasticsearch, Apache Kafka, Splunk

Workflow & BPM: Camunda (process automation, workflow design)

Infrastructure: Docker, Kubernetes, Terraform, CI/CD pipelines, AWS fundamentals

AI Tooling: Claude Code (6+ months active use), local LLM inference, AI-assisted development workflows

Methodologies: Microservices, Reactive programming, Distributed systems, Agile/Scrum

PROJECTS

AI Workflow Automation (Personal, Free Time) | Local LLMs, Agent frameworks

- Experimenting with AI-first workflow systems using local LLMs around the concept of *workflow-as-a-tool*: workflows are defined as discrete, composable units that can be registered as tools and dynamically dispatched by an orchestrator based on the task at hand – more flexible than static native tool calls or MCP servers bound to context.

Home Lab – Proxmox / Kubernetes Cluster (Personal, Free Time) | Proxmox, Kubernetes, IoT, Self-hosting

- Run a personal multi-node home lab across several mini PCs. My Bachelor's thesis was a tool for managing multi-tenant environments in Proxmox. Ongoing interest in self-hosted infrastructure, IoT integration, and running local LLM inference on-prem.

CERTIFICATIONS

Claude Certified Architect – Foundations (CCA-F) – Anthropic | AWS Certified Cloud Practitioner – in progress

LANGUAGES

Serbian: Native **English:** Professional working proficiency (B2+)
